

I claim:

1. An apparatus for collecting drips from a frozen treat, the apparatus comprising:

a base defined by a perimeter wherein the base has a top layer covering a bottom layer wherein the base is planar and further wherein the top layer is an absorbent material;

a lip on the perimeter of the base wherein the lip extends outward with respect to the top layer of the base; and

an opening in the base extending from the top layer to the bottom layer wherein the opening is located inside the perimeter of the base.

2. The apparatus of Claim 1 wherein the bottom layer is plastic.

3. The apparatus of Claim 1 wherein the absorbent material is paper.

4. The apparatus of Claim 1 further comprising:

an adhesive sticker on the base.

5. The apparatus of Claim 1 further comprising:

a washable tattoo on the base.

6. The apparatus of Claim 1 further comprising:

a partition in the base wherein the partition is removed from the base.

7. The apparatus of Claim 1 further comprising:

a mark printed on the base.

8. A system for collecting drips from a frozen treat mounted on a stick, the system comprising:

a base defined by a perimeter wherein the base has a top side and a bottom side opposite the top side wherein the base is planar;

a lip on the perimeter of the base wherein the lip extends outward with respect to the top side of the base;

an absorbing means covering the top side of the base wherein the absorbing means is located inside the perimeter of the base;

a slit in the base for supporting the stick of the frozen treat in a nonparallel position with respect to the base wherein the slit is located within the perimeter of the base; and

an opening in the absorbing means wherein the opening overlaps the slit in the base.

9. The apparatus of Claim 8 further comprising:

a sticker removable attached to the absorbing means.

10. The apparatus of Claim 8 further comprising:

a partition in the absorbing means wherein the partition is separable from the absorbing means.

11. The apparatus of Claim 8 further comprising:

a plurality of perforations partitioning the absorbing means.

12. The apparatus of Claim 8 further comprising:

a washable tattoo removably attached to the absorbing means.

13. A method for collecting drips from a frozen treat mounted on a stick, the method comprising of the steps:

providing a base defined by a first perimeter wherein the base has a first side and a second side opposite the first side wherein the base is planar;

providing a cover defined by a second perimeter wherein the cover has a first side and a second side opposite the first side wherein the second perimeter of the cover is less than the first perimeter of the base and further wherein the cover is an absorbent material;

connecting the second side of the cover to the first side of the base wherein the cover is located inside the perimeter of the tray;

providing an opening through the cover and the base wherein the opening extends from the first side of the cover to the second side of the base and further wherein the opening is located inside the perimeter of the cover; and

providing a lip on the perimeter of the tray wherein the lip extends outward with respect to the first side of the base.

14. The method of Claim 13 further comprising of the step:
perforating the cover to form a partition in the cover.

15. The method of Claim 13 further comprising the step of:
partitioning the base with a plurality of perforations.

16. The method of Claim 13 further comprising the step of:
connecting the second side of the cover to the first side
of the base.

17. The method of Claim 13 further comprising the step of:
laminating the cover.

18. The method of Claim 13 further comprising the step of:
inserting the stick of the frozen treat into the opening of
the cover and the base.

19. The method of Claim 13 further comprising the step of:
removing the cover from the base to form a disk.

20. The method of Claim 13 further comprising the step of:
utilizing the base as a disk wherein the base is separated
from the cover.
